-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Art Unit: 1731

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP8288482 or JP8301695.

JP8288482 discloses the process of irradiating an optical material containing an activator selected from a rare earth element or transition metal element with a light including such wavelength as the "potential curve of the ion of activating agent is in excited state" prior to valence number conversion. A laser is clearly used for this method. This process appears to be inclusive of the claimed process (See International Search Report).

JP8301695 also discloses the process of irradiating an optical material containing an activator selected from a rare earth element or transition metal element with a light including a wavelength in a light absorption wavelength range of the activator. Thus, it appears that light having a different wavelength than the activator in addition to light having the wavelength of the activator is utilized. A laser is clearly used for this method. This process appears to be inclusive of the claimed process (See International Search Report).

Claims 8-21 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Art Unit: 1731

Applicant timely traversed the restriction (election) requirement in Paper No. 7. The traversal is not persuasive for reasons of record.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Derrington whose telephone number is (703) 308-3832.
